# JIM WHITING NURSERY LANDSCAPE SERVICES

---

- **Full Service Landscape Service Residential & Commercial**

- We provide residential clients with a wide range of landscaping services — from providing plants and some design assistance for the do-it-yourself homeowner to a complete landscape design and installation. An incredible landscape starts out with a creative landscape design.

- **Hydro seeding**

- Hydro seeding is the quickest and most effective way to establish a new lawn from seed. The hydro seeding process is also efficient in repairing and over-seeding lawns, preventing erosion on slopes, and seeding hard to access areas. A combination of water, grass seed, hydro-mulch, and fertilizer are mixed to create a slurry. This mix is then sprayed onto prepared soil in one operation. The advantage is in the slurry mix, which absorbs and stores water, allowing the grass seed to germinate under ideal conditions. With proper care, a hydro seeded lawn will show growth within five to seven days and complete germination at three weeks. The hydro seeding process creates a healthy soil environment and well-established lawn that will prove its value for years to come.

- **Outdoor Living Areas**

- Outdoor rooms are the concept of creating functional outdoor spaces or "rooms"; extending your living space from within your home into your outdoor environment. Whether it be an intimate personal space for quiet relaxation or a larger area to entertain guests, we can help you evaluate your needs and provide creative ideas for you.

- 
- 

- **Patio brick walkways & driveways**

- Pavers and stones can create stunning pool decks, driveways, walkways and paths for your property. Increase your curb appeal and landscape functionality with our creative landscape & hardscape designers. We use only the finest materials from the area's best suppliers and are constantly discovering new materials that provide sustainability and make good economic sense.

- **Pondless water features**

- The rushing water of a stream or waterfall will excite the senses, and the tranquility of a natural pond will become a centerpiece for you and your guests to enjoy for years to come. A quality, unique water feature adds grace and serenity to your landscape. Not only can we design and install water features, we can also design and install dry streams for rain and storm water runoff management. A dry stream is an attractive way to divert and control rain water runoff.

- **Rainwater Gardens**

- **What exactly is a rainwater garden?**

A rainwater garden is garden bed whose purpose is to capture rainfall before it travels very far. It allows the rainwater to soak into the ground instead of washing soil and pollutants into our storm sewers. The general shape of a rainwater garden is that of a broad, shallow, flat-bottomed basin that is built where rain water tends to flow as it comes off roofs, driveways, sidewalks and lawns. It is not intended to hold water for more than a day

- **Retaining Walls, Natural stone & boulder walls**

We can confidentially install natural stone, boulder and modular block retaining walls in a variety of landscapes. Whether you need a retaining wall for a sloping yard, border for your pool or depth for your garden, retaining walls add not only reinforcement but visual enhancement as well

- **Trees moving**

One of the services that we offer is the ability to install or relocate larger trees. These trees need to be moved with a tree spade truck. If you would like to look at trees in our field, we do this by appointment
